

Summary

Software Engineer with 5+ years of experience in Cloud Engineering, DevOps, Platform Engineering, and SRE. Expertise in architecting scalable infrastructure across AWS and GCP using Terraform, Ansible, Kubernetes (EKS), and Docker. Proven track record of automating CI/CD pipelines, implementing service mesh architectures (Istio), building observability stacks (OpenTelemetry, Prometheus, Grafana), and deploying GenAI/RAG autonomous AI agents across BFSI, EdTech, Aerospace, and Industrial Automation domains.

Technical Skills

- **Cloud Platforms:** AWS (EC2, EKS, S3, ECS, Lambda, CloudWatch, SNS, SQS, VPC, Route 53, CloudFront), GCP (Cloud Run, Google Cloud Functions, App Engine, Cloud Build, Compute Engine, VPC)
- **Infrastructure as Code & Configuration:** Terraform, OpenTofu, Terragrunt, Ansible, HashiCorp Vault
- **Containers & Orchestration:** Kubernetes, AWS EKS, GKS, Docker, Helm, Argo CD, Istio Service Mesh
- **CI/CD & Automation:** Jenkins, GitHub Actions, GitLab CI/CD, Argo CD
- **GenAI & AI Engineering:** LangChain, LangGraph, Google ADK 2.0, RAG Architectures, Vector Databases (Pinecone), Vector Embeddings, OpenAI APIs, Hugging Face
- **Programming & Scripting:** Go, Python, TypeScript, JavaScript, Bash, Shell
- **Observability & Logging:** Prometheus, Grafana, OpenTelemetry, AWS X-Ray, Loki, ELK Stack, Fluentd, CloudWatch
- **Security & DevSecOps:** IAM, Kubernetes RBAC, HashiCorp Vault, Snyk, Trivy, SonarQube, WAF, Security Groups, PAC Compliance
- **Security:** HashiCorp Vault, Black Duck, IAM, Security Groups, NACL
- **Networking & Protocols:** VPC, Subnets, Transit Gateway, ALB/NLB, gRPC, GraphQL, MQTT, TLS, IEC 61131-3
- **OS & Scripting:** Linux (RHEL, Ubuntu, SUSE Linux 42.1, Centos, Fedora, Debian), Shell scripting.
- **Others:** Agile/Scrum, Infra as Code (IaC), SDLC/Release Management

Professional Experience

Infosys Limited – Associate Consultant

Nov 2024 to Present

- Streamlined software delivery lifecycles by collaborating with cross-functional teams to standardize CI/CD pipelines, container deployments, and infrastructure monitoring.
- Automated scalable EC2 provisioning by constructing custom AWS AMIs integrated with EC2 Launch Templates and Auto Scaling Groups.
- Orchestrated containerized microservices on AWS EKS using Docker and Kubernetes, configuring Istio Service Mesh for fine-grained traffic routing, security, and ingress management.
- Enforced DevSecOps policies by implementing fine-grained AWS IAM roles, Kubernetes RBAC policies, and HashiCorp Vault secrets management following least-privilege principles.
- Managed declarative GitOps Kubernetes deployments using Helm charts and Argo CD to drive high reliability and automated rollback strategies.
- Developed and deployed RAG-based AI chatbots using LangChain and LLMs for efficient retrieval of aircraft maintenance documentation.
- Optimized AWS expenditure by writing Go and AWS SDK automation scripts to discover and remove unattached and unused cloud resources.
- Engineered LangGraph-based AI agents featuring multi-step reasoning, custom tool integration, and autonomous workflow execution.

- Designed CI/CD pipelines with Ansible to automate build, package, and deployment tasks for application binaries across 200+ Linux servers.
- Automated data ingestion and vector embedding pipelines using Python, LangGraph, and Pinecone for enterprise RAG applications.

Tata Consultancy Limited – System Engineer

Jun 2022 to Nov 2024

- Mentored junior engineers and conducted code reviews to enforce software design patterns, maintainability, and DevOps best practices.
- Architected and integrated GCP cloud services to establish secure, scalable, and highly available infrastructure for enterprise clients.
- Enhanced end-to-end observability by deploying OpenTelemetry with Prometheus, Grafana, and AWS X-Ray to accelerate incident resolution and system performance tracking.
- Hosted microservices frontends on AWS S3 and CloudFront with Route 53, WAF, and ACM SSL certificates, ensuring secure and independent releases.
- Configured runtime parameters, resource limits/requests, Probes (Liveness/Readiness), and Horizontal Pod Autoscaling (HPA) for production Kubernetes workloads.
- Automated background batch processing workflows by configuring Go-based services with Linux crontab scheduling.
- Developed modular Terraform configurations to provision reusable AWS cloud infrastructure, reducing environment setup times by 40%.
- Integrated automated static and dynamic security checks (SCA/DAST/SAST) into CI/CD pipelines using Trivy and SonarQube for vulnerability scanning.
- Optimized Akamai CDN settings for OpenShift-hosted applications to improve asset caching, latency, and overall delivery performance.
- Implemented CI/CD-driven application deployment models on GCP App Engine to achieve zero-downtime releases.

DBDS Robotics Private Limited – Project Engineer

Oct 2020 to Apr 2022

- Delivered and maintained end-to-end frontend, backend, cloud, and IEC 61131-3 industrial control systems across full SDLC phases.
- Supported MVP product rollouts by resolving production bugs and deploying emergency hotfixes to ensure system stability.
- Built serverless event-driven architectures using Google Cloud Functions for processing asynchronous background tasks.
- Authored version-controlled Helm charts for automated application packaging, release management, and GitLab CI/CD deployments.
- Automated application compilation and container deployment pipelines using GitLab CI/CD and AWS EC2 runners.
- Integrated IIoT devices, HMI interfaces, and robotic hardware to automate industrial workflows, increasing operational efficiency by 35% and reducing hardware costs by 20%.
- Accelerated build and deployment automation through custom Jenkins scripts, Docker containers, and CI/CD pipeline optimizations.
- Re-architected legacy Node.js and Java microservices into Go-based AWS Lambda functions, reducing cold-start latency by 95%.
- Partnered with field engineers to troubleshoot IIoT gateway connectivity and virtual-to-physical device protocols.
- Maintained containerized workloads using Docker and Kubernetes, managing Dockerfile optimization and Kubernetes deployment manifests.

Educational Credentials

- | | |
|--|------------|
| • Bachelors of Engineer in Electronics and Telecommunication | April 2021 |
| • Diploma of Engineer in Electronics and Telecommunication | June 2015 |
| • Secondary School Certificate Examination | Marsh 2011 |
